-  Rare – Once Every 1-5 Years
-  Very Rare – Once Every 5-10 Years

*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.

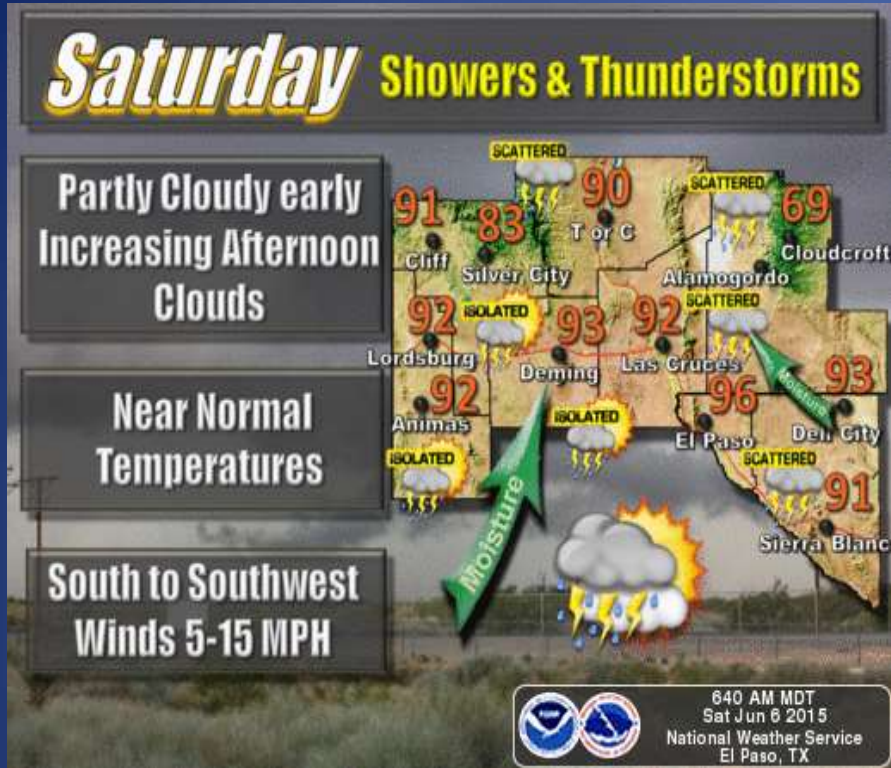

Hazardous Weather

Day 2-3 Weather Hazards

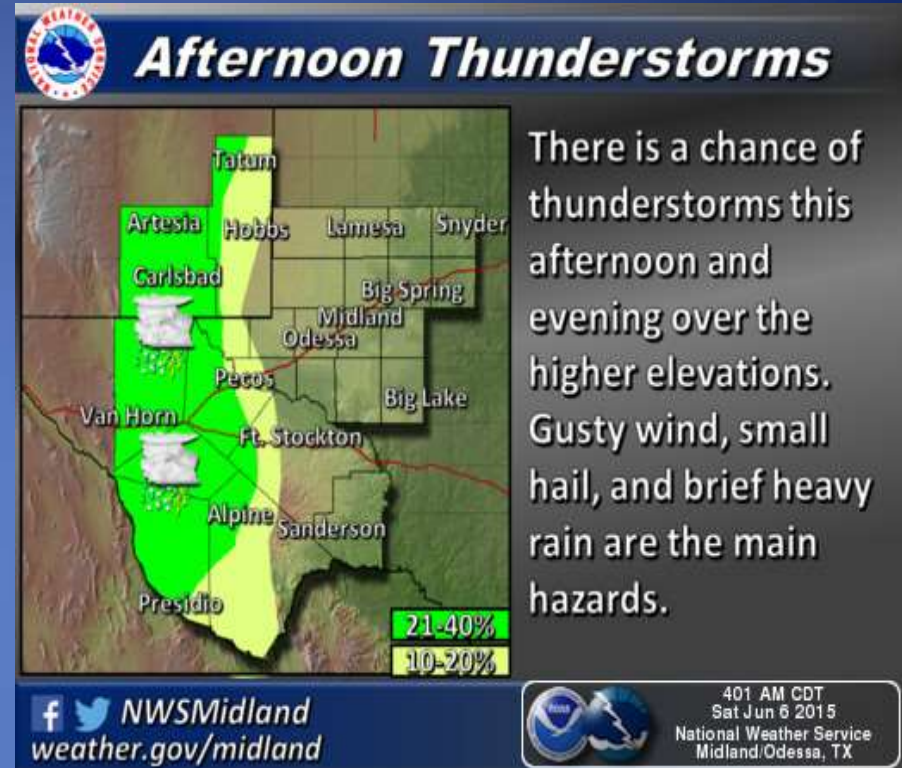

Valid: 0800 Sun - 0800 Tue

Hazardous Weather

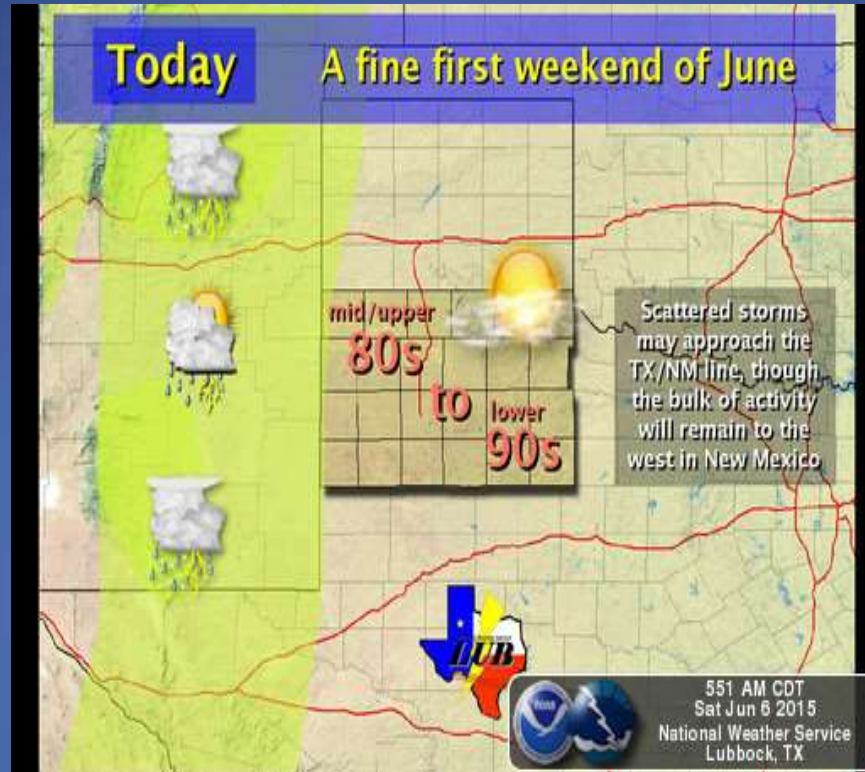

Moist unstable air is flowing into southern New Mexico and west Texas on south and southeast winds. As a result isolated to scattered showers and thunderstorms are expected to develop...especially in the afternoon hours. High temperatures will be in the upper 80s and lower 90s lowlands and around 70 to 80 mountains.

Thunderstorms are possible this afternoon and evening generally along and west of a Tatum to Marathon line. Any storm that develops will be capable of producing gusty wind, small hail, and brief heavy rainfall.

Hazardous Weather

Warm and breezy conditions will prevail with highs in the 80s to lower 90s. Storms will develop in New Mexico again today. The bulk of this activity will stay to the west, though a stray storm or two may drift across the TX/NM border.

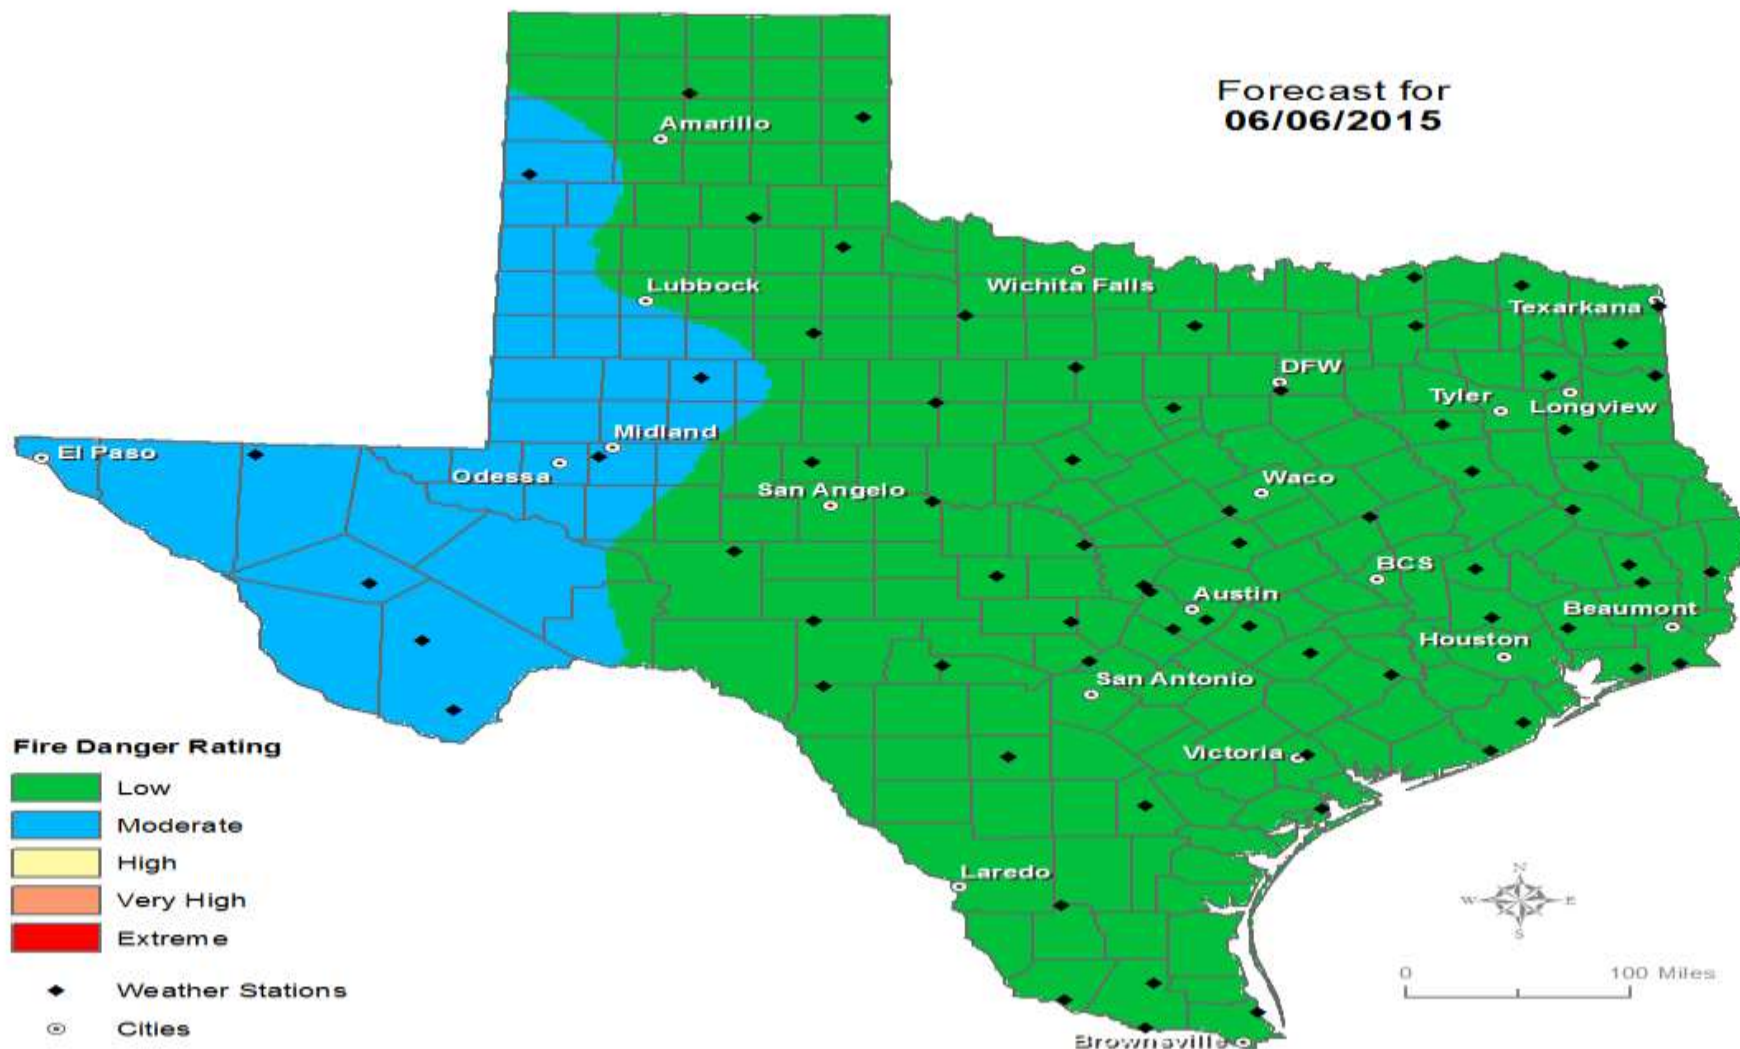

Weather Warning/Advisories Issued
